Amendment to the Specification

On page 73 of the specification, please replace paragraph [0280] with the following paragraph:

[0001] In Scheme 5, the mannosamine glycoside 1, is treated with the active ester of a protected amino acid (e.g., glycine) derivative, converting the sugar amine residue into the corresponding protected amino acid amide adduct. The adduct is treated with an aldolase to form the sialic acid 2. Compound 2 is subjected to catalytic hydrogenation of to produce compound 3. The amine introduced via formation of the glycine adduct is utilized as a locus of PEG or PPG attachment by reacting compound 3 with an activated PEG or PPG derivative (e.g., PEG-C(O)NHS, PPG-C(O)NHS), producing 4 or 5, respectively.
